DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement filed 8/13/04 and 5/16/05, specifically the foreign patent literature with abstract translation only, fails to comply with 37 CFR 1.98(a)(3) because it does not include a concise explanation of the relevance, as it is presently understood by the individual designated in 37 CFR 1.56(c) most knowledgeable about the content of the information, of each patent listed that is not in the English language. It has been placed in the application file, but the information referred to therein has not been considered.

Claim Objections

2. Claim 1 is objected to because of the following informalities: at line 16, insert -- reference-- following "designated". Appropriate correction is required.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 1-3 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

5. Claim 1 recites the limitation "the display conditions" in line 13. There is insufficient antecedent basis for this limitation in the claim.

6. Claim 1 recites the limitation "said remaining picked up images" in line 15. There is insufficient antecedent basis for this limitation in the claim.

Art Unit: 3735

7. Claim 2 recites the limitation "the amplification factor" in line 22; "the intensity of illuminating light" in lines 23-24; and "the intensity of photographing light" in line 25.

There is insufficient antecedent basis for this limitation in the claim.

8. Claim 3 is unclear as to how the "display means" is related to the other elements of the apparatus.

Claim Rejections - 35 USC § 102

9. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

10. Claims 1-4 are rejected under 35 U.S.C. 102(e) as being anticipated by Grinvald et al.'424 (US Patent 6,478,424).

11. Regarding claims 1-3, Grinvald et al.'424 teaches a retinal imager including digital CCD camera (col. 5, lines 29-30); illuminator adjusted with respect to duration, timing, wavelength, pattern and intensity (image capturing condition adjusting means for adjusting image pickup conditions) (col. 3, lines 57-60); digital storage (col. 6, line 59); computer software analysis where one or several images are designated as baseline images (col. 6, lines 60-63); differential images where the image is specific to the illumination conditions used (col. 7, lines 25-39); optical imaging imager differential video amplifier; and computer monitor or display (col. 5, lines 49-51).

Art Unit: 3735

12. Regarding claim 4, Grinvald et al.'424 teaches the method for displaying retinal images including: controlling the image pickup with respect to duration, timing, wavelength, pattern, and intensity (col. 3, lines 58-59); storing retinal image (col. 5, lines 47-48); setting the timing of the acquisition of images by the imaging device through a computer (col. 6, lines 51-59); storing several (second) images (col. 6, lines 58-59 and 61-63); analysis (selecting and comparing) of the images (col. 6, line 60); image values are re-scaled and displayed (setting display conditions) (col. 8, lines 9-12); and displaying on display means (col. 8, lines 12-13).
